(Introduction to agriculture)

Agriculture is one of the works that man has practiced for a long time, to the point that when Adam - peace be upon him - descended to the earth, God Almighty taught him all the professions and names, and the first thing he worked in was the profession of agriculture, where he cultivated the land and picked the crops to obtain his food, and therefore Agriculture is considered one of the most important sources of livelihood and obtaining food, because it is the only means of producing fruits, grains, and various crops. Agriculture also constitutes an important element of the economy, supplements national income, and provides people with their food needs. It is a way of life with a lot of integration. Agriculture Art and science at the same time; Because it is based on scientific and theoretical methods, and requires long understanding, study and experience in order to be successful in agriculture.

Agriculture is the bread basket for all people, and therefore countries that suffer from drought in their lands and desertification in their plains are forced to import their food from agricultural countries, which prompts all countries to pay attention to this vital sector, and to try to find several ways to develop agriculture and its equipment, especially since it is one of the most The sectors that witnessed development were previously dependent on manpower, primitive tools and animals, but today they are done using the latest machines, which saved time and effort, contributed to their development and increased quality.

(National Dates Company)

Saudi Arabia is one of the world's largest producers of dates. Moreover, Saudi Arabia has been ranked first worldwide in the government strategy index for Artificial Intelligence. Machine learning is also one of the most widespread topics of artificial intelligence and one of the emerging

technologies with a potential future paving the way for the fourth industrial revolution. The Saudi government is giving a primary importance to machine-learning teaching to produce a generation capable of creative solutions.

However, many of the teaching sources of this discipline are in English, with an apparent lack of Arabic sources. Thus, this paper seeks to bridge this gap by creating a dataset generated from our Saudi environment using two of the easiest data mining platforms: Orange and Teachable Machine and none of them requires programming. This study is the first work to establish a balanced dataset to classify two categories of organic Saudi dates. The dataset contains three subsets: 1) a dataset containing hand-crafted features to classify two types of organic dates (Ajwa or Medjool); 2) a dataset containing tabular data with features created automatically using deep learning to classify the two organic date types (Ajwa or Medjool), and 3) a dataset for images of Ajwa and Medjool dates. In addition, this study is considered the first work in Arabic using shallow machine learning and deep learning to create accurate models for classifying organic Saudi dates, which would enable scholars, researchers, and developers to create machine learning applications for classifying Saudi dates in various forms like websites, mobile apps, microcontrollers, tiny machine learning and internet of things applications.

(Establishment of the National Dates Company)

The National Center for Palms and Dates was established on 09/29/1432 AH pursuant to Royal Order No. 42649. It aims to develop the palm and date sector in the Kingdom of Saudi Arabia, and to contribute to raising production efficiency and reducing costs. It also seeks to make dates a primary source of national income. It is a food item that attracts both global and local consumers.

(The size of the National Dates Company)

*Dates in **Saudi Arabia** are one of the most important food and economic resources in the Kingdom of Saudi Arabia. It is a strategic national product linked to the history of Saudi Arabia. The palm tree represents a national symbol and a major component of the Kingdom's official emblem, and is also an important part of Saudi culture.*

*The Kingdom is home to more than 33 million palm trees and more than **123,000** agricultural holdings that produce more than **1.5 million** tons of dates every*

year. Saudi Arabia is ranked second in the world as the most date-producing country, and its exports of dates in 2020 reached 215,000 tons, exported to More than 107 countries, and the value of exports grew by 7.1%, worth 927 million riyals.

The Saudi palm and date sector contributes to many manufacturing and food industries, including food, fodder, and other industries such as medical and cosmetic products and building materials industries. The number of date factories in the Kingdom is 157.

The Kingdom launched the Saudi Dates Brand in October 2018, a brand that aims to ensure the quality of the product, raise the market value, and increase the percentage of the Kingdom's exports of high-quality dates. The number of palm trees that obtained the mark reached 1.7 million, while 42 factories, 41 farms and 24 companies received the mark, as of 2020.

The National Dates Company is classified as the first Arab company in exporting dates to all parts of the world, and the number of palm trees in it is 750,000.

(The purpose behind establishing the company)

The Medina Heritage Company aims to market Ajwa date products locally and internationally, in addition to contributing to the distribution of other date varieties to meet the growing global demand for date products, according to the Saudi Press Agency.

Head of the Consumer Products and Retail Sector at the General Administration of Investments in the Middle East and North Africa at the Public Investment Fund, Majed Al-Assaf, said that the step contributes to achieving the goals of the Kingdom's Vision 2030.

The establishment of the Madinah Heritage Company comes as a commitment from the Public Investment Fund to support the agricultural and food sector, one of the most promising sectors in the Kingdom.

(Cargill company)

Cargill United Corporation is a privately held American global food company headquartered in Minnetonka, Minnesota. Initially founded in Wilmington, Delaware in 1865, by William Wallace Cargill, it is one of the largest private companies in the United States by revenue. As of 2015, the company is ranked 15th on the Fortune 500 list, just behind McKesson and ahead of AT&T. Cargill is constantly exposed to criticism regarding the environment, human rights, and finance.

Cargill is engaged in the trading, purchasing and distribution of grains and agricultural commodities, such as palm oil. It is also involved in energy and steel trading, transportation, livestock raising and feed production, and the production of food ingredients such as starch, glucose, and vegetable oils and fats for use in processed foods and industrial use. Cargill has several financial services businesses, which work on financial risks in the company's commodity markets.

In 2003, the company gave part of its financial operations to Black River Asset Management, a global investment fund offering alternative investment opportunities, with approximately \$10 billion in assets and liabilities. In 2011, Cargill purchased a third stake in Mosaic, a global leader in the production and marketing of concentrated phosphate and potash crop nutrients.

In 2018, Cargill reported revenues of \$114.695 billion with profits of \$3,103 billion. Cargill employs more than 166,000 people in 66 countries and is responsible for 25% of all U.S. grain exports. The company supplies about 22%

of the US domestic meat market, in addition to importing more products from Argentina than any other country, and is the largest poultry producer in Thailand.

All eggs used by McDonald's American restaurants are produced by the factories of Cargill, which is the only American producer of burger salt used in the fast food and ready-to-eat food industry.

Cargill is owned by the Cargill family, and descendants of the Cargill and Macmillan families currently own 90% of the company. Gregory R. Page served as CEO until mid-2007, followed by Erne Staley until 2013, when he reached retirement age, with Dave McLennan serving until then.

(Cargill company size)

It is one of the largest international agricultural companies in Canada. The company employs approximately 6,000 people across Canada with \$3.5 billion in sales and \$1.2 billion in assets.

(Ownership of Cargill)

Cargill is owned by the Cargill family, and descendants of the Cargill and Macmillan families currently own 90% of the company. Gregory R. Page served as CEO until mid-2007, followed by Ern Staley until 2013, when he reached retirement age, and Dave McLennan took over until then.

(The purpose of establishing Cargill)

Sabeel - Cargill, the international company specializing in the production of feed concentrates and feed additives, announced the start of investing in Profimi Jordan Company in the amount of 15 million dollars, in order to expand it in an effort to raise it to the level appropriate for Jordan and its people. The American Cargill had completely acquired the international company Profimi Holding Company, and Profimi Jordan became part of the group Cargill companies are spread throughout the world and produce feed concentrates, feed additives, and animal health products for the poultry, cattle, and fish sectors in countries around the world and the Middle East.

The Minister of Agriculture, Dr. Akef Al-Zoubi, a number of businessmen and investors from a number of Arab countries, and the economic staff at the American Embassy in Amman participated in the celebration organized by Perfume Jordan today in one of its factories in the Qastal area.

In his speech at the celebration, the Minister of Agriculture affirmed that the government stands by the poultry sector, which represents the forefront of the agricultural sector, praising the Jordanian companies specialized in the sector, which are progressing from success to success and always seeking development and progress.

He praised the Profemi Jordan Company, owned by Jordanian businessman Muhammad Nabil Hamouda, which has been in existence since 1997 and is preparing for a promising future and supports the agricultural sector. It is one of the fruits of the openness of the group of companies whose production of feed concentrates covers the local market and the markets of neighboring countries.

For his part, Chairman of the Board of Directors of Profimi Jordan Company, Muhammad Nabil Hamouda, indicated that the company's location in Jordan contributed to it making great strides over the past 15 years, due to the interest of the parent company "Cargill" and because it has become one of the most important manufacturers and suppliers of these products in Jordan and the Arab countries as a result. For the great efforts, security and safety in Jordan.

Hamouda stressed that quality and farm service were among the most important foundations of the company's success in Jordan, and Cargill's entry had a positive impact on Profimi Jordan, as it received strong support and was able to significantly increase its sales and achieve good profits, which prompted "Cargill" to begin expanding and modernizing the factory currently located in Jordan at a cost Up to 15 million dollars until 2016.

*Cargill **CEO** David Webster gave an introductory presentation about the company, stressing that choosing Profimi for expansion and modernization came as a result of **Jordan's** position in the region in terms of location and environmental conditions for investment. Cargill also works to provide better food to people as a noble goal that is one of the company's values that It is concerned with the population and economic growth of peoples and increasing the per capita share of food.*

Webster considered that commitment to service is one of the most important values on which Cargill was founded, which therefore leads to providing the best to customers, producers, and the people in general.

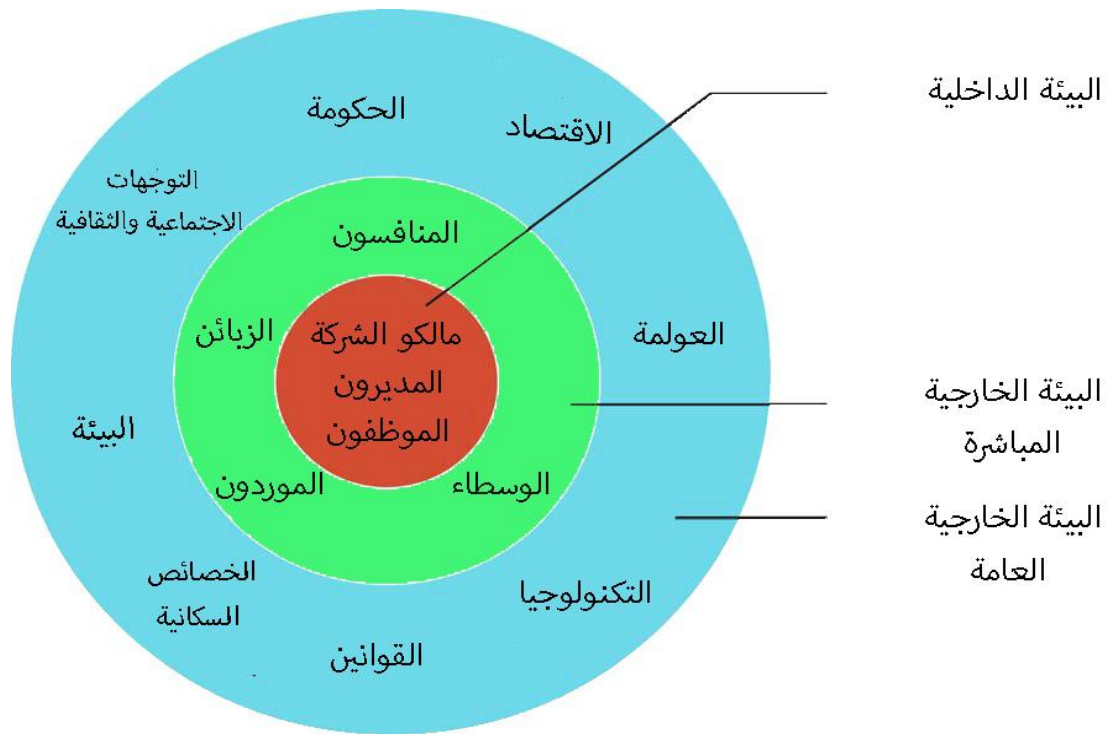

*The Economic Advisor at the US Embassy in Amman, Brian Grimm, for his part, praised the depth of the economic relations between **Jordan** and the United States of America, especially since the volume of trade exchange between the two countries reached **\$3 billion** at the end of last year.*

(Describe digital growth trends, technological impact, and increased competition in the agricultural business environment)

It is often assumed that a fourth agricultural revolution has begun, in which digital technologies will play a crucial role in transforming agricultural Roboto Bold Italic production – including crops, livestock, aquaculture and forestry – in a move towards increased efficiency and sustainability. These technologies include artificial intelligence, drones, robots, sensors, GNSS, as well as other digital machines that help automate diagnosis, decision-making and performance in various agricultural activities, allowing for increased accuracy and efficiency.² Some of these technologies are available commercially. While other technologies are approaching the stages of readiness.

(Describe the external factors that affect the business environment for agricultural)

• معدلات الضرائب، الرسوم الجمركية، الاتفاقيات التجارية، قوانين العمل، التشريعات البيئية	العوامل السياسية
• معدلات التوظيف، أسعار الفائدة، أسعار صرف العملات	العوامل الاقتصادية
• الخصائص الديموغرافية، تفضيلات المستهلكين، وجود أسواق متنوعة	العوامل الاجتماعية الثقافية
• الإنترنت، الهواتف الذكية، الاتصالات، الأتمتة	العوامل التكنولوجية
• ندرة الموارد، إعادة التدوير، مصادر الطاقة البديلة	العوامل البيئية
• العقود، القوانين والتشريعات، حقوق الملكية الفكرية	العوامل القانونية

(An explanation of the ways in which external factors affect the company's performance and the operations of the agricultural company)

The management system in institutions is not a closed system. There are many factors and many circumstances and consequences that affect and are affected by the system of each institution. In this article, we will review both the external factors and pressures that institutions suffer from at the present time and the types of organizational structures and the weaknesses in each of them. We will also discuss the mechanism of organizations organizing their internal environment and how to determine the extent of compatibility between the organization's culture and the external work environment. The management system in organizations is not a closed system. There are many factors, conditions and consequences that affect and are affected by the system of each institution. The company was supported by the Saudi government and provided facilities in terms of reducing taxes, which directly contributed to the growth and expansion of the company. The Saudi economy, as is known, is one of the strongest economies in the world, which is sufficient reason for the company's growth in its current form.
